

## Appendix

### Acceptable Enrichment Types (Adapted from the Web Document from UCSF)

#### ***\*Enviro-Dri***

Autoclavable and disposable nesting material for rats and mice. Allows rodents to regulate body temperature as needed. **Highly recommended for all breeding cages.**

#### ***\*Nestlets***

Disposable Nestlets offer non-nutritional nesting material for mice, reducing boredom. These are sterilized during manufacturing and are clean packed.

### ***Investigating/Running***

---

#### ***\*Igloo with Wheel***

Allows mice to exercise ad libitum without eliminating their nesting/housing area. Fits all standard caging.

### ***Foraging/ Gnawing/ Chewing***

---

#### ***\*Irradiated Forage Mix***

Allows rodents the opportunity to forage through bedding, reducing aggression and boredom.

#### ***\*Nylabones***

Promotes chewing/gnawing, an important behavior to lower risk of malocclusion in rodents. Autoclavable.

#### ***\*Wood Chews***

Promotes chewing/gnawing, an important behavior to lower risk of malocclusion in rodents. Autoclavable. **Recommended for mice that food waste via chewing entire ration into dust.**

### ***For Breeders***

---

#### ***\*Peanut Butter***

Recommended for breeders showing signs of cannibalism.

#### ***\*Protein Bars***

Recommended for breeders showing signs of cannibalism.
